

## Smallcappost.com Announces Profile Coverage of Eco Global

Feb. 23, 2010 (U.S. Equity News) --

Smallcappost.com announces that Eco Global, Corp. (OTCBB: ECOG) is this week's featured profile. Eco Global is a company specializing in the design, manufacturing and building of both small and large-scale low cost housing units made of its "INCABLOCKS." It announced today that the company will waive its licensing fees to individuals, builders and contractors using "INCABLOCKS" in the world-wide efforts to provide relief to the people and country of Haiti. The company owns a U.S. patent covering the "INCABLOCK Construction System," a patented concrete block design that is not only stronger than conventional concrete blocks, but is also fire resistant, termite free, and resistant to both high winds and earthquakes. Users of the "INCABLOCK Construction System" can construct "INCABLOCK" housing five times faster than conventional block, with a stronger interlocking connection. "INCABLOCK" is the ideal block construction system for Haiti because its interlocking block design is far superior to monolithic block construction and, importantly, "INCABLOCK" structures can be built with unskilled laborers.
